ASSIGNMENT NO.6.

Aim:-

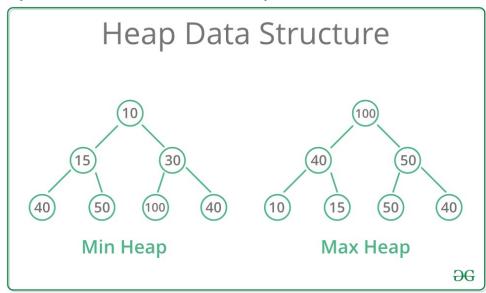

Read the marks obtained by students of second year in an online examination of particular subject. Find out maximum and minimum marks obtained in that subject using heap data structure.

Objective: To study the heap data structure.

Theory:-

A Heap is a special Tree-based data structure in which the tree is a complete binary tree. Generally, Heaps can be of two types:

- 1. **Max-Heap**: In a Max-Heap the key present at the root node must be greatest among the keys present at all of it's children. The same property must be recursively true for all sub-trees in that Binary Tree.
- 2. **Min-Heap**: In a Min-Heap the key present at the root node must be minimum among the keys present at all of it's children. The same property must be recursively true for all sub-trees in that Binary Tree.

Applications:-

S.Y.-C, Department of Computer Engineering, VIIT, 2018-19

GR NO:- 17U208

- 1) Heap Sort: Heap Sort uses Binary Heap to sort an array in O(nLogn) time.
- 2) Priority Queue: Priority queues can be efficiently implemented using Binary Heap because it supports insert(), delete() and extractmax(), decreaseKey() operations in O(logn) time. Binomoial Heap and Fibonacci Heap are variations of Binary Heap. These variations perform union also efficiently.
- 3) Graph Algorithms: The priority queues are especially used in Graph Algorithms like Dijkstra's Shortest Path and Prim's Minimum Spanning Tree.
- 4) Many problems can be efficiently solved using Heaps. See following for example.
- a) K'th Largest Element in an array.
- b) Sort an almost sorted array/
- c) Merge K Sorted Arrays.

Algorithm:-

1.max heap:-

```
Step 1 - Create a new node at the end of heap.
Step 2 - Assign new value to the node.
Step 3 - Compare the value of this child node with its parent.
Step 4 - If value of parent is less than child, then swap them.
Step 5 - Repeat step 3 & 4 until Heap property holds.
```

Program Code:-

```
#include<iostream>
using namespace std;

class hp
{
  int heap[20],heap1[20],x,n1,i;
  public:
  hp()
